

INFORMATION BOOKLET ON MONTREAL PROTOCOL

ACREX INDIA 2018

22-24 FEBRUARY 2018

EXHIBITION CENTRE
BENGALURU

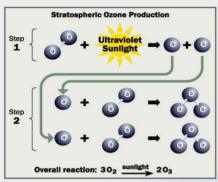

30th Anniversary of the Montreal Protocol

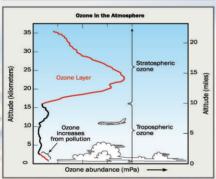

Contents

- 1. Stratospheric Ozone Layer
- 2. Science of Ozone Layer Depletion
- Antarctic Ozone Hole
- Major Uses of Ozone Depleting Substances
- Vienna Convention for the Protection of the Ozone Layer and its Montreal Protocol
- Amendments to the Montreal Protocol
- 7. Achievements of Montreal Protocol
- 8. Collective Global Action has Led to Recovery of Ozone Layer
- 9. Implementation of Montreal Protocol: India's Achievements
- 10. Salient Features of Ozone Depleting Substances Rules (ODS Rules)
- 11. Ozone Depleting Substances phaseout in India
- 12. Regulation on the Consumption of Ozone Depleting Substances as per ODS Rules
- 13. Hydrochlorofluorocarbons (HCFCs) Phaseout Management Plan (HPMP)
- 14. Hydrochlorofluorocarbons (HCFCs) Phaseout Management Plan (HPMP) Stage II
- 15. Kigali Amendment to Montreal Protocol FAQ
- 16. Kigali Amendment to the Montreal Protocol for phasedown of Hydrofluorocarbons (HFCs)
- 17. Kigali Amendment to the Montreal Protocol: India's contribution
- 18. How can you Help Protect the Ozone Layer
- 19. Climate Efficient Green Buildings can help Protect Ozone Layer
- 20. Refrigeration and Air-conditioning Industry can help Protect Ozone Layer and Climate
- 21. O2C Technology Roadshow
- 22. Code of Practices for RAC System Servicing
- A way towards Climate Friendly Cooling in India HPMP Stage I, and
 - A way towards Climate Friendly Cooling in India HPMP Stage II
- 24. Ozone Award for Political Leadership India

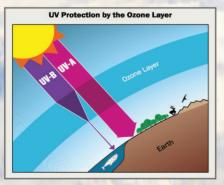

Stratospheric Ozone Layer

- Ozone is a tri-atomic molecule of oxygen
- Formed naturally in the upper level of the Earth's atmosphere
- Three molecules of oxygen in the presence of sunlight form two molecules of Ozone in the stratosphere

- Stratosphere extends between 10-50 kilometeres above the earth surface
- 90% of ozone formed in the atmosphere is present in the Stratosphere, hence called Stratosphere Ozone Layer

 Stratospheric Ozone Layer absorbs a large part of the Sun's biologically harmful UV-B ultraviolet radiation

Source (figures).

Science of Ozone Layer Depletion

Principal Steps in the Depletion of Stratospheric Ozone

1 Emissions

Human and natural processes emit Halogen source gases, which contain chlorine and/or bromine, at earth's surface. Halogen source gases are often referred to as Ozone Depleting Substances (ODSs). Human activities generate major proportion of ODSs as compared to natural sources.

2 Accumulation

ODSs accumulate in the atmosphere and are globally distributed throughout the lower atmosphere by winds and other air motions.

3 Transport

ODSs are transported to the stratosphere by air motions.

Conversion

Most ODSs are converted in the stratosphere to reactive halogen gases in chemical reactions involving ultraviolet radiation from the sun.

5 Chemical reaction

Reactive halogen gases cause chemical depletion of stratospheric ozone over the globe.

Low temperature surface reactions on polar stratospheric clouds (PSCs) significantly increase reactive halogen gases and thereby cause severe ozone loss in polar regions in late winter and early spring.

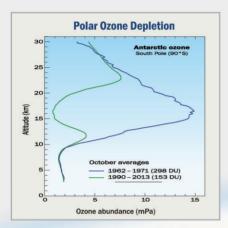

spring.

Removal

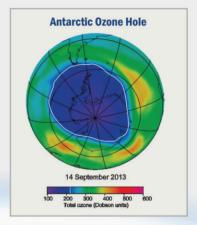

Air containing reactive halogen gases returns to the troposphere where the

gases are removed by moisture in clouds and rain.

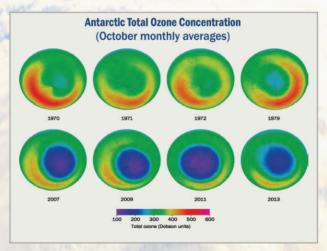

Antarctic Ozone Hole

Vertical distribution of Ozone in Stratosphere over Antarctica

Antarctica Ozone Hole in 2013 (Blue region depicts extremely low concentration of ozone over Antarctica)

Changes in Ozone concentrations over Antarctica (1970-2013)

Major uses of Ozone Depleting Substances

As a refrigerant in air conditioning equipment

As a foam blowing agent in foam manufacturing sector including foam insulation panels, thermoware, insulation for commercial refrigeration products, water heaters, etc.

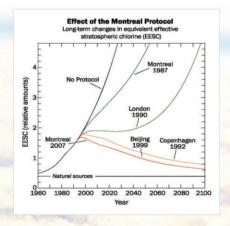

As a fire extinguishing agent in fire extinguishing equipment.

Uses of Chlorofluorocarbons (CFCs), Carbontetrachloride (CTC), halons and methyl bromide have been phased out globally

VIENNA CONVENTION FOR THE PROTECTION OF THE OZONE LAYER AND ITS MONTREAL PROTOCOL

- Vienna Convention for the Protection of Ozone Layer 22nd March, 1985
- Montreal Protocol on Substances that Deplete the Ozone Layer -16th September, 1987
- Amendments to the Montreal Protocol
 - · Montreal -1987
 - London 1990
 - Copenhagen 1992
 - · Beijing-1999
 - Kigali 2016
- Implementation of the Montreal Protocol has led to phase-out of major Ozone Depleting Substances such chlorofluorocarbons (CFCs), Halons, carbon tetrachloride (CTC) and methyl bromide

globally, Hydrochlorofluorocarbons (HCFCs) are still being phased-out.

 Montreal Protocol is the only environment treaty having universal ratification of 197 UN member countries.

Amendments to the Montreal protocol

Montreal Protocol

Signature: 16th September, 1987 India became Party: 19th June, 1992

Number of parties ratified: 197

LONDON AMENDMENT

Date of Amendment: 27th – 29th June, 1990 Date of ratification by India: 17th September, 1992 Number of parties Ratified: 197

COPENHAGEN

Date of Amendment: 23rd – 25th November, 1992 Date of ratification by India: 3rd March, 2003 Number of parties Ratified: 197

Inclusion of HCFCs,

HBFCs and Methyl

Bromide as controlled

substances

MONTREAL AMENDMENT

Date of Amendment: 15th – 17th September, 1997 Date of ratification by India: 3rd March, 2003 Number of parties Ratified: 197

BEIJING AMENDMENT

Date of Amendment: 29th November – 3rd December, 1999 Date of ratification by India: 3rd March, 2003 Number of parties Ratified: 197

KIGALI AMENDMENT

Date of Amendment: 10th - 15th October, 2016 Date of ratification by India: Yet to ratify Number of parties Ratified: Nil

Inclusion of additional controlled substances (Chlorofluorocarbons (CFCs), Methyl Chloroform, Carbon tetrachloride (CTC), etc.)

Inclusion of Hydrofluorocarbons (HCFCs) as transitional substances

Establishment of Financial Mechanism-Multilateral Fund

Ten year Grace Period for Article 5 Parties Licensing system put in place

out in

Bromo-Chloromethane added as controlled substance for immediate phase-out

Production Control of HCFCs

Inclusion of Hydrofluorocarbons (HFCs) within the ambit of Montreal Protocol

Achievements of Montreal Protocol

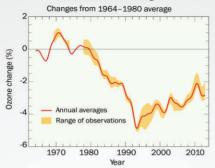

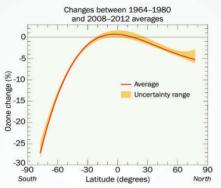

India has met it compliance targets under ongoing HCFC phase out Chlorofluorocarbons (CFCs), Carbontetrachloride (CTC), Halon and Methyl Bromide completely phased out from India

Collective global action has led to the signs of recovery of Ozone Layer

Simulation results showing trend towards recovery of Ozone Layer

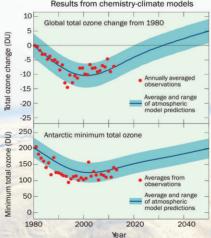

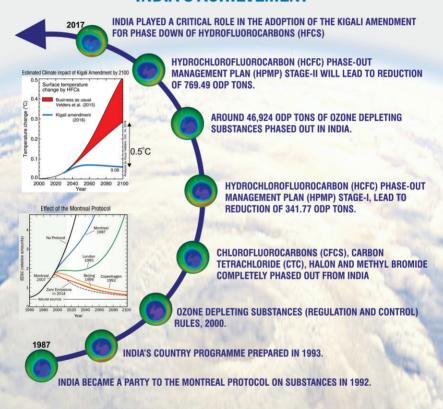

Simulations of Stratospheric Ozone Depletion

Michaela I. Hegglin (Lead Author), David W. Fahey, Mack McFarland, Stephen A. Montzka, and Eric R. Nash, Twenty Questions and Answers About the Ozone Layer: 2014 Update, Scientific Assessment of Ozone Depletion. 2014, 84 pp., World Meteorological Organization, Geneva, Switzerland, 2015.

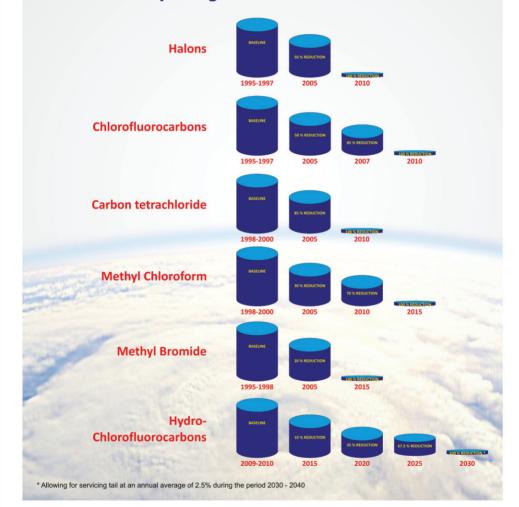

IMPLEMENTATION OF MONTREAL PROTOCOL: INDIA'S ACHIEVEMENT

SALIENT FEATURES OF OZONE DEPLETING SUBSTANCES (REGULATION AND CONTROL) RULES, 2000 AND ITS AMENDMENTS

- Production and consumption control of Ozone Depleting Substances (ODSs)
- Ban on trade with non-Parties
- Ban on creation of new capacity/ expansion of ODS based industry
- Mandatory registration for producers, importers / exporters, manufacturer, sellers, reclamations / destructions enterprises, manufacturer / importer / exporter of compressors, dealing with ODSs
- Import and Export of ODS are subject to Licence issued by the Directorate General of Foreign Trade (DGFT) based on recommendations obtained from Ozone Cell, Ministry of Environment, Forest and Climate Change (MoEF&CC)
- Introduction of quota system for production of HCFC-22 for non-feedstock applications
- Prohibition on import of pre-blended polyols containing HCFCs
- Phohibition on import of blends containing ODSs including Group VI Substances

Ozone Depleting Substances Phase out in India

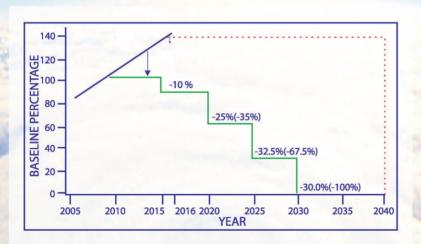

Regulation on consumption of Ozone Depleting Substances on end use basis as per Ozone Depleting Substances (Regulation and Control) Rules, 2000 and its amendments

Manufacture of Fire extinguishers and fire extinguishing systems January 2001 containing halon Manufacture of Aerosol products or pressurised dispensers (excluding January 2003 metered dose inhalers for medicinal purpose) using CFCs. Manufacture of Polyol for foam products using CFCs. Manufacture of foam products including foam part of domestic refrigerator using CFCs Manufacture of Mobile Air Conditioners and charging at Automobile industry using CFCs Manufacture of other Refrigeration and Air-conditioning products using **CFCs** 1 Manufacture of Metered Dose inhalers for medicinal purposes using January 2010 **CFCs** Servicing of fire extinguishers and fire extinguishing systems using Halon Use of Methyl Bromide except pre-shipment and guarantine **January** 2015 Manufacture of domestic refrigerators using HCFCs Manufacture of continuous sandwich panel using HCFCs Manufacture of all other foam products including discontinuous sandwich January 2020 panel using HCFCs Manufacture of air-conditioners containing HCFCs January 2025 Manufacture of other refrigeration and air-conditioning products (excluding compressors) using HCFCs Manufacture of fire extinguishers or fire extinguishing systems using **HCFCs** Manufacture of all other equipments or products using HCFCs Servicing of refrigeration and air-conditioning equipment or products January using HCFCs. Servicing of fire extinguishers and fire extinguishing systems using **HCFCs**

HYDROCHLOROFLUOROCARBONS (HCFCS) PHASE OUT MANAGEMENT PLAN (HPMP)

- 19th Meeting of Parties to the Montreal Protocol in September,
 2007, accelerated the phase out of HCFCs by 10 years
- Roadmap for phase out of HCFCs in the country brought out in 2009
- HPMP developed by the country to phase out HCFCs with UNDP as lead implementing agency, and UNEP and GIZ as cooperating agencies for implementation of HPMP.

Accelerated phase-out schedule of HCFCs for Article 5 parties

HCFC PHASE OUT MANAGEMENT PLAN (HPMP) STAGE-II KEY HIGHLIGHTS

- HPMP Stage-I implemented for achieving 2013 and 2015 compliance targets of the Montreal Protocol
- HPMP Stage-II is under implementation from 2017 till 2023
- 400+ participating enterprises in HPMP Stage-II including 300+ MSMEs to be addressed in the polyurethane foam sector.
- 6 large enterprises to be addressed in the air conditioning manufacturing sector
- Technical Assistance activities for MSMEs in the polyurethane foam
 sector to facilitate phase out
- Focus on promoting energy efficiency, development of building codes integrating HCFC phase out issues, cold chain development with non-HCFC alternatives and development of standards for new non-ODS and low GNP alternatives in HPMP
- Linkage with Skill India Mission for Capacity Building in the RAC sevicing sector.
- Net direct CO2-equivalent emission reductions of about 8.5 million metric tonne annually from 2023.

KIGALI AMENDMENT TO THE MONTREAL: PROTOCOL - FAO

What is the Kigali Amendment?

The Kigali Amendment is an amendment to the Montreal Protocol on Substances that Deplete the Ozone Layer. It was adopted by the 28th Meeting of Parties to the Montreal Protocol (M0P28) on 15 October 2016 in Kigali, Rwanda. The Amendment adds powerful greenhouse gases hydrofluorocarbons (HFCs) to the list of substances controlled under the Protocol to be phased down.

What is the expected impact of the Kigali Amendment?

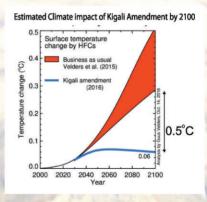

The Amendment will phase-down HFCs under the Montreal Protocol.

How will the Kigali Amendment work?

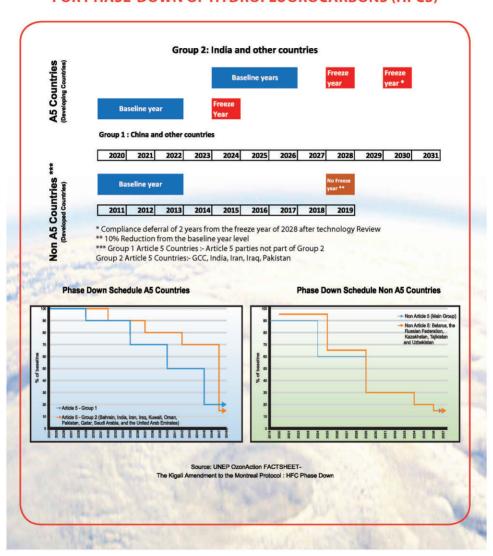

Under the Amendment, Montreal Protocol parties are required to gradually reduce HFC use by 80-85 per cent by the late 2040s. First reductions by most developed countries are expected in 2019. Most developing countries will follow with a freeze of HFCs consumption levels in 2024, and in 2028 for some developing countries.

What is required for the Kigali Amendment to enter into force?

The Kigali Amendment will enter into force on 1 January 2019, provided that it is ratified by at least 20 parties to the Montreal Protocol. If that condition is not met by that date, the Amendment will become effective on the 90th day following the date of ratification by the 20th party.

KIGALI AMENDMENT TO THE MONTREAL PROTOCOL FOR PHASE-DOWN OF HYDROFLUOROCARBONS (HFCS)

KIGALI AMENDMENT TO THE MONTREAL PROTOCOL: INDIA'S CONTRIBUTION

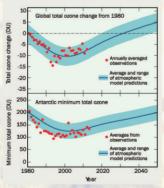

- The freeze year for India will be 2028, with a condition that there will be a technology review in 2024/2025 and, if the growth in the sectors using refrigerants is above certain agreed threshold, India can defer its freeze up to 2030.
- Multilateral Fund under the Montreal Protocol to incentivise for maintain or increase the energy efficiency with new technology while transitioning away from Hydrofluorocarbons (HFCs).
- Funding for Research and Development and servicing sector in developing countries.
- An agreement that provides adequate space for growth of Indian economy, while providing adequate time for industry to shift to sustainable alternatives in the interest of environment.
- Minimize the cost to consumers in transitioning away from HFCs and provide for domestic innovation to develop in the sector of new generation refrigerants and related technologies.
- The Kigali amendment reflects the global ambition and at the same time allows us to take necessary steps for protection of environment and our domestic economy in a longer time frame.

How can you help protect the Ozone layer

- Dispose of old air conditioners and refrigerators containing Ozone Depleting Substances (ODSs) responsibly. Refrigerants should be removed from an appliance before it is discarded.
- · Old portable Halon fire extinguisher should be returned for cycling
- Use ozone friendly products. Replace old ODS based equipment with non-ODS equipment
- Buy products (refrigerators, air-conditioners, fire extinguishers, etc.)
 that do not have ODSs
- Spread awareness about protection of Ozone Layer, and ozone depleting substances

Collective global action has led to the signs of recovery of ozone layer

Simulation results showing trend towards recovery of ozone layer

CLIMATE EFFICIENT GREEN BUILDINGS CAN HELP PROTECT THE OZONE LAYER

Hydrochlorofluorocarbons Phase Out Management Plan and Buildings

- The building sector as many others, can help India fulfil her commitments to protect the Ozone layer
- Good building design and efficient equipment will
 - Reduce
 - Heating and cooling loads by 30% 50%
 - Size of the HVAC equipment & quantity of refrigerant required
 - Meet residual heating and cooling loads through alternative refrigerants
 - Use non ozone depleting foam blowing agents and firefighting equipment
- Reduce HCFCs and HFCs through Green Building Codes
 - Increase energy efficiency of appliances and equipment: Adopt
 - Standards and Labeling
 - Building Energy Codes that cover refrigerant require
 - Insulation
 - HVAC
 - Refrigeration &
 - Fire suppression systems
 - Abide by Regulatory measures

Refrigeration and air-conditioning industry can do a lot to protect the ozone layer and climate by

Phasing out HCFCs, phasing down HFCs and choosing Alternative Technologies that are:

Ozone-friendly/ zero ozone depleting potential

Climate-friendly/ zero or low-global warming potential

Energy efficient

G2C

Technology Roadshow

O2C or Ozone2Climate technologies are energy efficient technologies with zero ozone depleting potential (ODP) and zero to low global warning potential (GWP) alternatives, which are used to replace HCFCs/HFCs (Hydrochlorofluorocarbons) Hydrofluorocarbons) that are being phased out under the Montreal Protocol On SubstancesThatDepletetheOzoneLayer.

The O2C alternatives include:

Domestic Refrigeration

-R-600a (Isobutane)

-HFO-1234yf

Commercial Refrigeration

-Hydrocarbons—isobutane (R-600a), propane (R-290) and propylene (R-1270)

-Ammonia (R-717)

-Carbon dioxide (R-744)

-Lower-GWP HFC refrigerants (HFC-32, HFC-152a, HFC-161, HFO-1234yf,

other unsaturated fluorochemicals, as well as blends of them)

Foam Blowing Agents

-Cyclopentane Blends

-HFO-1234ze

-Methylal -Methyl Formate

Building / Construction foam applications

-Hydrocarbons (cyclopentane,cyclopentane blends

isobutane and n-pentane)

-CO₂ (Carbon Dioxide)
-Di-Methyl Ether

-Methyl Formate

-Methylal

-Methylal

-HFOs (HFO-1234ze and others)

Technology Roadshow

O2C or Ozone2Climate technologies are energy efficient technologies with zero ozone depleting potential (ODP) and zero to low global warning potential (GWP) alternatives, which are used to replace HCFCs/HFCs (Hydrochlorofluorocarbons) Hydrofluorocarbons) that are being phased out under the Montreal Protocol On Substances That Deplete the Ozone Layer.

The O2C alternatives include:

	Window/ Split AC <3TR	Ducted & Packaged A	
	- HFC-32 : A2L	- HFC-32(675); A2L	
	- R-290 (A3)	- R-452B(680) ; A2L	
	- Blends of HFC/HFO	- R-444B (300); A2L	
	- R452B, R444B (A2L)		
Cavell Chilley		Carour Chillen	

Scroll Cillier	ocrew chiller
- HFC-32 ; A2L	- HFO-1234yf (< 1); A2L
- R-452B ; A2L	- HFO-1234ze (<1) A2L
	- R-513A (600); A1

Centrifugal Chiller - HFO-1233zd (1) . A1

- HFO-1336mzz (2); A1 - HFO -1234yf (<1); A2L

- HFO- 1234ze (<1; A2L

Code of Practices for RAC* System Servicing

Dos

- Always apply best practices within a safe working environment;
- Always recover refrigerants before servicing or scrapping a system;
- Recycle refrigerants for reuse whenever possible;
- Contaminated refrigerants must be stored safely prior to destruction;
- Leaks must be identified and repaired before the system is recharged with refrigerants. Never assume that only one leak is possible!
- Improve your handling of refrigerants, e.g. minimize purging refrigerant hoses;
- Completely empty disposable refrigerant cylinders before scrapping;
- Maintain the best possible and energy-efficient operational conditions of the RAC system;
- Keep record of service and maintenance and manage the RAC systems logbook;
- Maintain good relations with equipment operators and inform them about important, general system features.

Don'ts

- If you can't work safe, don't do it;
- A well operating and leakproof system should not be subjected to rertofit or conversion;
- Never vent ODS** or refrigerants with high GWP*** into the atmosphere;
- Never use ODS or refrigerants with high GWP as a cleaning solvent for the system (except secured in a closed loop), or blowing-out the heat exchanger's surface;
- Do not break vacuum with refrigerant for multiple evacuation process, always use OFDN (Oxygen Free and Dry Nitrogen);
- Do not top-up the refrigerant charge of a RAC system without knowing the correct actual filling amount;
- Never use a recovery cylinder (or any other cylinder) which is not designed, certified or clearly labeled for the intended purpose;
- Never mix different types of refrigerants in one recovery cylinder;
- A RAC system designed for the use of low GWP refrigerants (such as HCs) should never be reverse-retrofitted to the use with HFCs/HCF-Cs/CFCs;
- Never attempt to work with damaged or defective tools or equipment, do not use longer refrigerant transfer hoses than necessary.

Highlights from the HCFC Phase-out Management Plan for Refrigeration & Air Conditioning (HPMP) – completed activities

RAC Technicians Training:

- Training provided through a network of training partners across all the states in the country;
- More than 11'000 technicians trained through over 400 programs in installation & servicing room air conditioners up to 2 ton;
- Training included good servicing practices, leak prevention and introduction to alternative refrigerants.

A way towards climate-friendly cooling HPMP in India - Stage II

Highlights from the HCFC Phase-out Management Plan for Refrigeration & Air Conditioning (HPMP) – proposed activities

- Technicians training in consultation with National Skill Development Corporation (NSDC) propose to complement the National Skill Development Mission Launched by the Horble Prime Minister of India. The aim is to create convergence across sectors and States within the country;
 - Certification: Technicians must be certified or qualified for installation, servicing, maintenance, repair, decommissioning, leakage checking and recovery;
- State of the art training centre equipped with the latest equipment and tools for the RAC trade: Training provided in AC and Refrigeration equipment; support for design of servicing tools and products. Industry, RAC experts and technicians can avail of these facilities for developing synergies between manufacturing and servicing.

OZONE AWARD FOR POLITICAL LEADERSHIP - INDIA

Ozone Award for Political Leadership
during the Kigali Amendment Negotiations
to Late Shri Anil Madhav Dave, the then
Hon'ble Minister of State (Independent Charge)
Environment, Forest and Climate Change,
Government of India.
